GP-148 type fiber optic splice closure specifications

GP-148 type fiber optic splice closure is used in the terminal access link of FTTH optical fiber to the home access system. It is a device for protecting feeder optical cables and wireless optical cables in optical fiber transmission networks. It has the functions of optical fiber storage and bifurcated docking. the product's protection level reaches IP 54, and is suitable for outdoor wall-mounted installation. The maximum capacity 2core.3 cable ports and the convenient wireless optical cable can be led out to the top.

Reliable sealing

The fiber optic splice closure shell is sealed with EPDM sealing strips, and the optical cable inlet and outlet holes are sealed with silicone sealing rings. The head shell is sealed with buckles, which makes opening and installation more convenient, construction is faster, and the sealing performance of the product is better.

Modular design

The bottom box welding card slot adopts an integrated structural design, which can save more installation space and make construction simpler and more convenient. Supports coiled storage of optical fibers with loose tubes, and the bending radius of the optical fiber is greater than 40 mm.

Powerful Features

Supports the use of optical cables such as divergence and docking.

Supports overhead or wall-mounted installation.

Excellent practicabilit

The fiber optic splice closure shell is made of modified PC+ ABS material, and the internal metal parts are made of high-quality steel plate materials. It can have a service life of more than 20 years (depending on the environment) and has good impact resistance and corrosion resistance.
